    Highly stereoselective synthesis of beta-lactam deriv. - by
    treating lithium enolate of organic ester with organic imine cpd. in
    polar solvent

  Abstract (Basic): JP 62081368 A
          Beta-lactam deriv. is selectively synthesised by treating lithium
      enolate of organic ester with organic imine cpd. in polar solvent.
          As organic imine cpd. imine coordinated with trialkylaluminium may
      be used. When the cpd. isused as imine, cis prod. may be synthesises in
      high stereoselectivity of 100%.
          USE/ADVANTAGE - Highly stereoselective synthesis of lactam derivs.
      Prods. are useful as pharmaceuticals.
